

SprayEZ Presents

FastKick© Gun

SprayEZ first became well known for the bed liner cartridge systems that sprayed through a Dual Cartridge Pneumatic gun, known as the FastKick Gun™.

Then SprayEZ put other materials in the cartridges such as their spray foam insulation, joint seal, hard coats, and ExpandoThane© Roofing membrane and discovered an easier way to apply these materials for smaller jobs.

One of the best parts of the use of the FastKick© Gun is the portability and the cleanup after a job. Where the larger machines use a pressurized line for each of the two components, the FastKick© Gun only needs an air line. Also disposal of the empty cartridge is much easier than the disposal of the larger drums the machines require. All in all the FastKick© Gun provides great usability and functionality at a fraction of the cost of a larger machine.
