

SprayEZ Do It Yourself Spray Foam Kits, are specifically designed to insulate buildings with either Open Cell Foam, as a wind barrier or Closed Cell Urethane Foam, as a complete wind barrier and insulated envelope. This is especially helpful in areas that do not have local Spray Foam Contractors or large equipment cannot reach the site.

Plural Component Cartridge

The answer is the SprayEZ spray foam Cartridge. SprayEZ first became well known for the Bed liner cartridge systems that sprayed through a Dual Cartridge Pneumatic gun, known as the FastKick Gun©. Then SprayEZ put other materials in the cartridges such as DVSpray foam Insulation, Joint seal, Hard Coats, and Expandothane ZDWHUSURRIQmembran

Clean up after using the cartridges is made simple by simply disposing of the empty containers and disconnecting the gun and coiling up the airline. Because this system is so easy to use the popularity has really increased in the foam industry.
